		Issue: 3
		Date: October 2015
		Sheet: 1 of 1

## Environment Policy Statement

We, Air & Ground Limited, recognise that in the conduct of our business processes we draw on a number of resources. Although we are a SME, the use of such resources may ultimately have an impact on the environment and social issues throughout the supply chain.

Through management leadership, employee participation and supplier interaction, we will be proactive in protecting human health by insisting our suppliers meet our standards, promoting environmental stewardship in the use of natural resources, and implementing innovative environmental practices.

## Our Commitment

We are committed to:

Conducting our business operations in a manner that both complies with environmental legislation and minimises effects on the environment.

Preventing pollution that may be caused by our business activities.

The responsible use of energy (in our case, principally electricity) throughout our business by conserving energy wherever possible, monitoring and improving energy consumption and efficiency on a regular basis, and encouraging best practice within our company and by our business associates

A staff training programme to raise awareness of environmental issues and enlist their support in improving the Company's performance knowledge, skills, and equipment

Reduce energy consumption and waste through our policy and by continual improvement.

Actively promoting recycling where we can both internally and with our customers and suppliers.

This commitment will be achieved by:

- Monitoring and reviewing energy use so as to reduce it as far as practicable
- Monitoring and reviewing waste disposal and recycling as much as possible
- Assessing and monitoring site discharges, together with site atmosphere, to ensure compliance with the appropriate regulations
- Assessing the environmental impact of any new activity, product lines and processes prior to their introduction
- Providing relevant information on environmental matters to employees and other interested Parties
- Assessing, and deploying where practicable new technologies that are environmentally beneficial
- Implementation of packaging standards that reduce waste without compromising the contents.
- Compliance with environmental legislation and researching suppliers to ensure they have not been prosecuted for breaking the law.
- Cutting down deliveries, using more efficient transport, eliminating unnecessary journeys by the consolidation of customer orders, just-in-time forecasting of customer requirements to reduce inventory and reduces the likelihood of waste through over-ordering

It is incumbent on each of us to assess our own roles and responsibilities and to help fulfil, to the utmost of our abilities, the commitments set forth in this statement.

Mr M. Powell  
Supply Chain & Support Director
